

## **AMENDMENTS TO THE CLAIMS**

This is a complete and current listing of the claims, marked with status identifiers in parentheses. The following listing of claims will replace all prior versions and listings of claims in the application.

### **LISTING OF CLAIMS**

1. (Currently Amended) An electrical power circuit breaker comprising:

a housing;

a connecting bar, accommodated in an opening in the housing, the end of said connecting bar which protrudes into the housing being part of a switching contact arrangement and bearing an arcing horn which has a fixing limb resting on the connecting bar, wherein at least one projection pointing towards the connecting bar is formed on the fixing limb of the arcing horn, and wherein the connecting bar has a recess for the purpose of accommodating the projection, wherein a collar which covers the fixing limb of the arcing horn at the top and at the sides is integrally formed on the housing.

2. (Previously Presented) The power circuit breaker as claimed in claim 1, wherein the projection is in the form of a bent-back section on the fixing limb of the arcing horn, and wherein the recess of the connecting bar is in the form of a groove.

3. (Previously Presented) The power circuit breaker as claimed in claim 2, wherein the fixing limb is dimensioned to have the same width as the connecting bar, wherein the projection extends over the entire width of the fixing limb, and wherein the recess extends over the entire width of the connecting bar.

4. (Currently Amended) The power circuit breaker as claimed in claim 3, wherein the opening arranged in the housing of the power circuit breaker is dimensioned such that it is matched to the cross-sectional shape of the connecting bar, ~~and wherein a collar which covers the fixing limb of the areing horn at the top and at the sides is integrally formed on the housing.~~

5. (Previously Presented) The power circuit breaker as claimed in claim 1, wherein the connecting bar has an integrally formed web as a stop device on the housing, and wherein fixing devices, which grip the web and can be operated from the outside on the housing, are provided.

6. (Previously Presented) The power circuit breaker as claimed in claim 1, further comprising:

a web, integrally formed on the connecting bar as a stop on the housing; and

fixing means for gripping the web and for being operated from the outside on the housing.

7. (Currently Amended) An electrical power circuit breaker comprising:

a switching contact arrangement including a connecting bar, accommodated in an opening of a housing, wherein an end of the connecting bar includes an arcing horn, a fixing limb of the arcing horn resting on the connecting bar and including at least one projection, and wherein the connecting bar includes a recess for accommodating the projection, wherein a collar which covers the fixing limb of the arcing horn at the top and at the sides is integrally formed on the housing.

8. (Previously Presented) The power circuit breaker as claimed in claim 7, wherein the projection is in the form of a bent-back section on the fixing limb of the arcing horn, and wherein the recess of the connecting bar is in the form of a groove.

9. (Previously Presented) The power circuit breaker as claimed in claim 8, wherein the fixing limb is dimensioned to have the same width as the connecting bar, wherein the projection extends over the entire width of the fixing limb, and wherein the recess extends over the entire width of the connecting bar.

10. (Currently Amended) The power circuit breaker as claimed in claim 9, wherein the opening arranged in the housing of the power circuit breaker is dimensioned such that it is matched to the cross-sectional shape of the

~~connecting bar, and wherein a collar which covers the fixing limb of the  
arcing horn at the top and at the sides is integrally formed on the housing.~~

11. (Previously Presented) The power circuit breaker as claimed in claim 7, wherein the connecting bar has an integrally formed web as a stop device on the housing, and wherein fixing devices, which grip the web and can be operated from the outside on the housing, are provided.

12. (Previously Presented) The power circuit breaker as claimed in claim 7, further comprising:

a web, integrally formed on the connecting bar as a stop on the housing; and

fixing means for gripping the web and for being operated from the outside on the housing.
